Subject: Purestream Water Treatment/Water Remediation

Shaun,

My name is Amy Hansen and I work with Purestream Services, a water treatment services company that operates in the oil and gas field treating produced water for discharge. We have worked closely with Lisa Biddle in your DC office - She and many of the EPA employees from the DC office and Region10 have actually toured our treatment and discharge facility with Southwestern Energy recently.

We are interested in discussing water treatment and environmental remediation with you in relation to the Animas spill. We have proven and reliable technologies that we would like to implement in this situation.

Would we be able to set up call to discuss this?

Thanks,

Amy
